[portfoliodanielchaves.netlify.app](https://portfoliodanielchaves.netlify.app)

Front-End Developer with 4+ years building responsive, accessible web applications using React, Vue.js and Angular. Strong focus on performance and UX—implemented code splitting and lazy loading, achieving an approximate 30% reduction in Time-to-Interactive (Lighthouse). Skilled at translating Figma designs into reusable component libraries and working in cross-functional Agile teams.

| <b>Técnico en Data Engineer</b><br>CENFOTEC                                 | <b>Jun 2025 - Aug 2026</b> |
| <b>Bachillerato en Informática Empresarial</b><br>Universidad de Costa Rica | <b>Jul 2018 - Nov 2023</b> |

## SKILLS

**Languages:** JavaScript, TypeScript, PHP, Python, SQL  
**Frameworks:** React, Vue.js, Angular, Bootstrap  
**Styling:** HTML5, CSS3, SASS, CSS-modules, BEM  
**Tooling & DevOps:** Git, GitHub, Azure, Webpack, Jira, PowerShell  
**Design & Collaboration:** Figma, Agile/Scrum  
**Testing & Performance:** Lighthouse, Jest

## AWARDS

| <b>Python • Machine Learning • Data Engineering</b><br><b>Credit Risk Analysis Project</b><br>Developed an end-to-end credit-risk scoring pipeline using Python, resulting in a 30% reduction in processing time and improved model accuracy by 15%.                                                                                                                                                                                                | <b>Nov 2025 - Dec 2025</b><br><b>Costa Rica</b>           |
| <b>Front-End Developer</b><br><b>Jazzgs - Business Solutions</b><br>Translated Figma designs into pixel-accurate, accessible components using React, Vue.js and Angular. Integrated RESTful APIs into dashboards and interactive modules. Designed SASS + CSS-modules architecture for scalable styles. Implemented lazy loading and bundle splitting; reduced TTI by 20% improvement. Collaborated in Agile teams to deliver data-driven features. | <b>Jul 2022 - Dec 2025</b><br><b>San José, Costa Rica</b> |
| <b>Software Developer</b><br><b>University of Costa Rica</b><br>Developed a PHP/MySQL HR web application that streamlined departmental operations, resulting in a 30% reduction in processing time and improved user satisfaction ratings.                                                                                                                                                                                                          | <b>Aug 2020 - Jun 2021</b><br><b>San José, Costa Rica</b> |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                          |                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| <b>Credit Risk Analysis Project</b><br>Built an end-to-end credit-risk scoring pipeline using Python (Pandas, NumPy, Scikit-learn). Performed data cleaning, exploratory analysis, feature engineering and model evaluation. Automated preprocessing steps and created reusable modules for ingestion and model training, Boosted optimizations of loadings times by 30% | <b>Nov 2025 - Present</b> |
